LawyerDex – Technology Versions

MERN + Tailwind CSS lawyer directory | Versions resolved from the npm registry on 12 October 2026

Every version below is the exact release that **npm install** resolved and that the project was built and smoke-tested with. package.json files use caret ranges (for example ^19.3.0), so a later compatible patch or minor release will also install.

1. Runtime and database

Package / tool	Version	Purpose
Node.js	**22.22.2 (tested)**	JavaScript runtime. Requirement: >= 22.22.0 (React Router 8 needs it). A newer LTS also satisfies this.
npm	**10.9.7**	Package manager with workspaces (monorepo: server + client).
MongoDB server	**8.x**	Database. Not installed in the build environment, so the exact server release is not verified; use the latest 8.x or Atlas.

2. Backend (M, E, N)

Package / tool	Version	Purpose
express	**5.3.0**	HTTP framework (Express 5: async errors forwarded automatically).
mongoose	**9.11.1**	MongoDB ODM, schemas, indexes, text search.
zod	**4.6.6**	Request validation and environment validation.
jsonwebtoken	**9.0.3**	Signed auth tokens stored in HTTP-only cookies.
bcryptjs	**3.0.3**	Password hashing (cost 12).
helmet	**8.3.0**	Security headers.
cors	**2.8.6**	Origin allow-list with credentials.
express-rate-limit	**8.7.1**	Rate limiting (global, auth, consultation form).
cookie-parser	**1.4.7**	Reads the auth cookie.
compression	**1.8.2**	Gzip responses.
morgan	**1.12.1**	Request logging in development.

3. Frontend (R) and styling

Package / tool	Version	Purpose
react / react-dom	**19.3.0**	UI library.
react-router	**8.4.0**	Routing. Imported from *react-router* (the separate react-router-dom package is not needed).
@tanstack/react-query	**5.104.2**	Server-state caching and mutations.
react-hook-form	**7.90.0**	Forms.
@hookform/resolvers	**5.9.1**	Connects Zod schemas to React Hook Form.

Package / tool	Version	Purpose
zod (client)	**4.6.6**	Client-side form validation.
lucide-react	**1.55.0**	Icons.
tailwindcss	**4.3.3**	Utility CSS, configured CSS-first with @theme (no tailwind.config.js).
@tailwindcss/vite	**4.3.3**	Tailwind 4 Vite plugin (no PostCSS setup needed).

4. Build tooling

Package / tool	Version	Purpose
vite	**8.3.4**	Dev server and production bundler.
@vitejs/plugin-react	**6.1.2**	React support for Vite 8.
concurrently	**^9 (root dev dependency)**	Runs API and web app together with **npm run dev**.

5. Notes and verification

• **Verified:** npm install succeeded with no peer-dependency errors; the client production build (Vite 8 + Tailwind 4) completed; all server files pass a syntax check; 14 API smoke tests passed (health, 404, input validation, auth guards, role checks, tampered cookie).

• **Not verified:** behavior against a live MongoDB. The sandbox could not run a database, so the seed script and database-backed routes are unexecuted. Run **npm run seed** and try the flows once you have a database.

• **Express 5 / Mongoose 9 specifics used:** request query is read-only in Express 5, so validated data is placed on req.valid; express-mongo-sanitize is intentionally not used (incompatible with Express 5); Mongoose sanitizeFilter is enabled instead.

• **Tailwind 4 specifics used:** custom component classes are defined with @utility, and theme tokens with @theme.

• To re-check for newer releases at any time, run **npm outdated** in the project root.
